Technical Skills

Computer Languages Learned:

1. HTML5
2. CSS
3. Javascript
4. JQuery

Projects

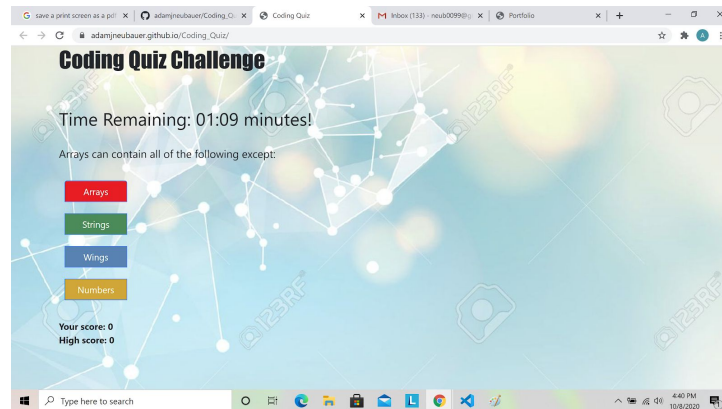

Password Generator

Description: This goal of this project was to create a functioning web page that creates a password for the user based on the criteria that the user requires. When the webpage is opened the user is asked how many characters they would like to have in their password and whether or not the password should contain uppercase letters, lowercase letters, special characters, and/or numbers. The "generate password" button should generate a password once clicked that meets the criteria put forth.

Coding Quiz

Description: The goal of this project is to create a webpage that contains a multiple choice quiz which tests the user's knowledge of basic computer science questions with 5 questions. The site will track and display the user's score and store the highest score achieved on the test. The quiz contains a two-minute timer that ends the quiz once it reaches 0. The user may take the quiz as many times as he or she wants.

Weather Dashboard

Description: The goal of this project is to create a weather application that allows the user to search for weather for a specified city and get a current weather outlook and 5-day forecast.

The application should store the most recently searched city and show those results when the application is loaded.
